

Taymoor Khan

Technical lead and senior software engineer with 9+ years building JavaScript and TypeScript platforms, React and Next.js applications, Node.js systems, and design systems across developer experience, content platforms, and agentic engineering.

Skills

JavaScript & Web Engineering: TypeScript, JavaScript, Node.js, React, Next.js, React Server Components, TanStack Start, HTML, CSS, Angular, WebRTC

Platforms & Architecture: Payload CMS, Convex, PostgreSQL, REST APIs, content modeling, server/client architecture, caching and revalidation, design systems, API and SDK design, observability

Delivery & Quality: Nx, pnpm workspaces, CI/CD, GitHub Actions, CircleCI, Jenkins, Vitest, Jest, Playwright, SonarQube

Leadership: Technical leadership, system architecture, platform strategy, cross-functional delivery, mentoring, developer experience

Agentic Engineering: OpenAI Codex, Claude Code, GitHub Copilot, multi-agent orchestration, Model Context Protocol (MCP), retrieval-augmented generation (RAG), human-in-the-loop delivery

Experience

Cisco

San Francisco, CA

Senior Software Engineer / Technical Lead - Cisco Security Business Group

Nov 2022 - Present

- **Next.js Developer Platform:** Architected and led a developer experience platform built with **Next.js** App Router, **React Server Components**, **TypeScript**, and **Node.js**, establishing reusable foundations for content delivery, search, integrations, and operational tooling.
- Led architecture and sustained delivery across a modern **Next.js** application, defining **React Server Component** and client boundaries, typed content-rendering contracts, navigation, search, and integration seams.
- Owned framework and runtime evolution across caching, revalidation, **React Compiler**, **Turbopack**, observability, and production diagnostics while keeping contributor workflows maintainable.
- **Payload CMS Content Platform:** Led a migration to **Payload CMS**, shaping content models, publishing workflows, contributor tooling, and production operations while connecting the CMS to a **Next.js** frontend through typed contracts and reliable cache revalidation.
- Designed **Payload CMS** collections, access and publishing workflows, generated **TypeScript** contracts, search and indexing paths, and contributor tooling for a production content platform.
- Built reliable publication, revalidation, audit, and recovery paths across **Payload CMS**, **Next.js**, and **PostgreSQL**, backed by observability and independent-process integration tests.
- **React Design System & Component Platform:** Co-lead and maintainer for an enterprise **React** design system, guiding roadmap and releases while evolving component APIs, **React 19** and **RSC** compatibility, testing, and CI across a large **Nx** monorepo.
- Own roadmap, release planning, maintainer office hours, and design and product-team alignment for a shared **React** component platform used across enterprise product teams.
- Leading a phased **React** design-system modernization with composable component APIs, server-compatible views, and automated codemods.
- **Engineering Systems & Reliability:** Improved multi-repository delivery through **pnpm**, **Nx**, **GitHub Actions**, **Vitest**, **Playwright**, **SonarQube**, dependency governance, and focused **CI/CD** changes that made feedback faster and production behavior easier to diagnose.

- Designed and repaired **CI/CD** pipelines across **GitHub Actions**, **CircleCI**, **Jenkins**, coverage, release provenance, source maps, and security scanning, favoring reproducible checks and fast contributor feedback.
- **Applied AI & Agentic Engineering**: Orchestrated agent-assisted component migrations across parallel **Git worktrees**, assigning bounded tasks and coordinating implementation, review, recovery, and integration through package-level checks and shared compatibility tests.
- Developed and tested a **Codex** and **GitHub Actions** workflow to triage **SonarQube** findings and GitHub issues, generate scoped fixes, run tests, and propose draft pull requests with evidence checks and maintainer approval.

Senior Software Engineer - Developer Portal / App Hub - Webex

Mar 2022 - Nov 2022

- Delivered features across Developer Portal, App Hub, and Control Hub in **Angular** while coordinating architecture, scope, implementation details, and deadlines across teams and time zones.
- Helped architect a **Next.js** rewrite of a major legacy application, decomposed epics into executable work, and became productive in enterprise **Angular** within two weeks for a high-priority feature.

Software Engineer / Open Source JavaScript Maintainer - Webex

Feb 2018 - Mar 2022

- Maintained and evolved the public Cisco Webex **JavaScript** SDK and related browser and **Node.js** libraries used across media, telehealth, government, and partner experiences, with a focus on product architecture and developer experience.
- Contributed **WebRTC** meeting capabilities, including packet-loss adaptation, screen-sharing improvements, and Safari reliability.
- Replaced a merge-gated **Jenkins** end-to-end pipeline with contributor-friendly **CircleCI** workflows, reducing build time from about 90 minutes to 15 minutes and improving **WebDriver** and **Sauce Labs** stability.

Growth Engineer Intern - Webex Growth Team

May 2017 - Jan 2018

- Served as the sole growth engineer embedding product experiments in the Webex Teams web client; integrated **Optimizely** A/B testing and **Segment** and **Amplitude** analytics to measure daily active-user growth.
- Migrated Developer Portal analytics from **Mixpanel** to **Segment** and **Amplitude** and helped modernize the web client from **React** 15 to 16, **React Router** 3 to 4, and a **Jest**, **Enzyme**, and **Webpack** stack.

Selected Projects

Agentic Software Delivery Systems - Independent R&D

2026 - Present

- Built a **GitHub Projects** control plane that turns product outcomes into an autonomous **Hermes** Kanban loop, managing staged delivery, runtime evidence, Ready ordering, and WIP.
- Engineered digest-verified stage contracts, bounded delegation, restart-safe checkpoints, scoped invalidation, and explicit human approval gates for destructive, publication, and release actions.
- Applied the model to developer-platform delivery through resumable task packets, dependency-aware agent waves, phase-gated review, and fail-closed release evidence bound to ownership and **CI/CD** results.
- Integrated **Model Context Protocol (MCP)**, retrieval, and provider routing with repository-native verification across models and **Git worktrees** while retaining human ownership of consequential actions.

Agent-Assisted Cross-Platform Application - Personal Project - In Development

2026 - Present

- Orchestrating agent-assisted development of a personal application spanning **iOS/SwiftUI**, **Android**, and **TanStack Start**, with **Convex** and **Better Auth**.
